Part II: Certification	II. Health information		
	I, the undersigned official veterinarian, certify that the animals described above meet all the conditions laid down in the health attestation below:		
II.1. GENERAL CONDITIONS			
(7)II.1.1. the animals originate from premises(1) where no livestock species, other than pigs, are raised. They have been reared indoors since birth and have not been fed or been in contact with household or other waste, raw meat products, milk products or milk. All feed for these animals has been stored indoors at all times;			
II.1.2. the premises of origin(1) of the animals have not been subject to restrictions and/or quarantine measures pertaining to animal diseases of concern for the importation of the species in question for the duration of their residency;			
(7)II.1.3. the animals intended for export			
(6)either ○ [II.1.3.1. were born(2) on the premises of origin(1),]			
(6)or ○ [II.1.3.1. were born on premises other than the premises of origin, were separated from their dams and underwent early weaning and were regrouped before the age of 30 days and reared on the premises of origin. In this case, all the premises where the piglets were born had a health status equivalent to that of the premises of origin and in accordance with all the conditions relating to premises and herds listed in this certificate;]			
II.1.4. the animals were placed in pre-export quarantine premises approved by an official veterinarian of the exporting country for the necessary period – for no less than thirty (30) days – for carrying out tests required to meet Canada’s import requirements. This pre-export quarantine ends with the signing of this health certificate by an official veterinarian of the exporting country, at the time of export to Canada. The animals have remained free from any signs of infectious or contagious diseases and have been free from contact with animals, products or equipment with a lower animal health status throughout the quarantine period;			
II.1.5. under the supervision of the signing official veterinarian:			
(7)II.1.5.1 the animals were transported without delay from the premises of origin(1) to the pre-export quarantine premises in vehicles or containers which had been cleaned and disinfected and did not have contact with any animals or equipment used on animals of a lesser health status;			
II.1.5.2 the approved pre-export quarantine premises were thoroughly cleaned and disinfected prior to the animals’ entry;			
II.1.5.3. no animals of a lesser health status were introduced onto the approved pre-export quarantine premises during the quarantine period;			
II.1.5.4. no animal was removed from the pre-export quarantine premises, unless specifically authorized by an official veterinarian of the exporting country(3);			
II.1.5.5. all the treatments and tests associated with the conditions in this export certificate were carried out using sterile veterinary products and equipment;			
II.1.5.6. a declaration signed by the owner/exporter has been received by the official veterinary services of the exporting country stating that the following arrangements have been made for the transportation of the animals from the pre-export quarantine premises to the port of loading and to their final destination in Canada:			
II.1.5.6.1. the animals will be transported direct from the pre-export quarantine premises to the place of loading in a vehicle which has been cleaned and disinfected beforehand;			
II.1.5.6.2. during transportation from the pre-export quarantine premises to the place of loading and shipment, the animals will not come into contact with animals of a lower health status or equipment used on animals of a lower health status;			
II.1.6. The animals have been treated for parasites as follows:			

Part II: Certification	II. Health information		
	<p>(6)either ○ [II.1.6.1. within seven (7) days of export, the animals were treated for internal and external parasites with Ivermectin at a dosage of 0.3 mg/kg body weight or other treatment that is licensed and approved for that purpose by the central veterinary authorities of the exporting country;]</p> <p>(6)or ○ [II.1.6.1. the animals were derived by caesarian section and maintained without exposure to endoparasites and ectoparasites;]</p> <p>II.1.7. all animals placed in the pre-export quarantine premises gave negative results to all the tests required for exportation to Canada as indicated in points: II.6 and II.7;</p> <p>II.1.8. the animals were examined by an official veterinarian within the twenty-four (24) hours of loading before scheduled departure to Canada (departure date stated on part 1 of this health certificate). The animals were in good health and free from clinical signs of infectious (or contagious) diseases and, as far as can be determined, have not been exposed to such diseases;</p> <p>II.1.9. each animal is individually identified with an eartag, and the number has been entered on page 1 or on a list attached to this health certificate;</p>		

Part II: Certification	II. Health information		
	II.2.	AFRICAN SWINE FEVER (ASF)	
		II.2.1.	the animals come from the exporting country or a zone where no restrictions have been introduced by the European Union (EU) in relation to ASF and have been kept in the exporting country or in this zone since birth;
		(7)II.2.2.	the pigs have had no contact with pigs or pig products (including imported pigs or products thereof) which have been in a region where restrictions are in place in relation to African swine fever;
		II.2.3.	the exporting country complies fully with all relevant EU legislation concerning this disease;
	II.3.	FOOT AND MOUTH DISEASE (FMD)	
		II.3.1.	the animals come from the exporting country or a zone where no restrictions have been introduced by the European Union (EU) in relation to FMD and have been kept in the exporting country or in this zone since birth or for the last 3 months;
		(7)II.3.2.	the pigs have had no contact with pigs or pig products (including imported pigs or products thereof) which have been in a region where restrictions are in place in relation to FMD;
		II.3.3.	the pigs have not been vaccinated against FMD;
		II.3.4.	the exporting country complies fully with all relevant EU legislation concerning this disease;
II.4.	CLASSICAL SWINE FEVER (CSF)		
	II.4.1.	the animals come from the exporting country or a zone where no restrictions have been introduced by the European Union (EU) in relation to CSF for at least 3 months;	
	(7)II.4.2.	the pigs have had no contact with pigs or pig products (including imported pigs or products thereof) which have been in a region where restrictions are in place in relation to CSF;	
	II.4.3.	the pigs have not been vaccinated against CSF and are not the progeny of vaccinated sows;	
	II.4.4.	the exporting country complies fully with all relevant EU legislation concerning this disease;	
	(6)(4) <input type="checkbox"/>	the domestic pigs exported to Canada come from a premise(1) which is not situated in a region currently subject to restrictions because of the appearance of CSF in a population of feral pigs and which has been subject to surveillance to confirm the absence of CSF in accordance with EU requirements;]	
	II.4.5.		
II.5.	SWINE VESICULAR DISEASE (SVD)		
	II.5.1.	the animals come from the exporting country or a zone where no restrictions have been introduced by the EU in relation to SVD and have been kept in the exporting country or in this zone since birth or for the last 6 weeks;	
	(7)II.5.2.	the pigs have had no contact with pigs or pig products (including imported pigs or products thereof) which have been in a zone not recognised as free from SVD;	
	II.5.3.	the exporting country complies fully with all relevant EU legislation concerning this disease;	
II.6.	BRUCELLOSIS		
	II.6.1.	the premises of origin(1) has been declared free from brucellosis by the exporting country;	
	(7)II.6.2.	the pigs have had no contact with pigs or pig products (including imported pigs or products thereof) which have been in a premises not recognised as free from brucellosis;	
	II.6.3.	the exporting country complies fully with all relevant EU decisions legislation;	
	II.6.4.	the animals tested negative for brucellosis using the fluorescent polarization assay (FPA)(6), or the indirect ELISA (iELISA)(6), or the Buffered Plate Antigen Test (BPAT)(6) or any other test recognised by the OIE I(5), namely (insert the name), within the thirty (30) days immediately preceding the scheduled departure date;	

Part II: Certification	II. Health information		
	<p>II.7. AUJESZKY'S DISEASE (AD) (Pseudorabies)</p> <p>(6)either</p> <ul style="list-style-type: none"> ○ [II.7.1. the EU has recognised that the exporting country or zone of origin is free from AD, and: <ul style="list-style-type: none"> (7)II.7.1.1. the pigs have had no contact with pigs or pig products (including imported pigs or products thereof) which have been in a zone not designated as free from AD, with the exception of live pigs or porcine semen in the context of intra-Union trade and in accordance with Commission Decision 2001/618/EC or Council Directive 90/429/EEC as amended; II.7.1.2. the pigs have not been vaccinated against AD; II.7.1.3. the exporting country complies fully with all relevant EU legislation;] (6)or ○ [II.7.1. the premises of origin(1) and all farms situated within a radius of three (3) kilometres thereof were free from clinical and epidemiological signs of AD for the twelve (12) months prior to export, and the entire group of pigs have been tested negative for AD, using serum neutralization (SN) test(6), or indirect ELISA(6) or, where appropriate, another test which the CFIA deems acceptable, within the thirty (30) days immediately preceding the scheduled departure date;] 		

Part II: Certification	II. Health information			
	II.8.	ENTEROVIRUS ENCEPHALOMYELITIS (EE)		
		II.8.1.	all the premises on which the animals have resided in the last twelve (12) months were free from clinical and epidemiological signs of EE for the thirty-six (36) months immediately before the animals left these premises;	
	II.9.	TUBERCULOSIS		
		II.9.1.	the premises of origin(1) were free from clinical, microbiological, pathological and epidemiological signs of Mycobacterium bovis for the thirty-six (36) months immediately before the animals left these premises;	
		(7)II.9.2.	the pigs did not come into contact with any pigs or pig products that came from a premises not declared to be free from bovine tuberculosis;	
	II.10.	CYSTICERCUS CELLULOSAE		
		II.10.1.	all the premises on which the animals have resided in the last twelve (12) months were free from clinical and epidemiological signs of Cysticercus cellulosae for the twelve (12) months immediately before the animals left these premises;	
	II.11.	TRICHINELLOSIS		
		II.11.1.	all the premises on which the animals have resided in the last twelve (12) months were free from clinical and epidemiological signs of Trichinella spiralis for the twelve (12) months immediately before the animals left these premises.	
		Notes		
Part I:				
Box reference 1.2.a:		In case this certificate is produced via TRACES system, a unique reference number assigned by the TRACES system is indicated.		
Box reference I.6:		Indicate the import permit number.		
Box reference I.11:		Name, address and, when applicable, approval number of the place of dispatch.		
Box reference I.25:		Indicate the commodity code of the harmonised system (HS code) with the title.		
		Official identification: the animals must be individually identified in accordance with Council Directive 2008/71/EC Birth date: (dd/mm/yyyy) Sex: (M= male, F = female)		
Part II:				
(1)		The premises of origin is defined as the last premises on which the pigs resided for at least 60 days before entering the pre-export quarantine premises.		
(2)		If the animals were born by caesarean section, the premises of birth is defined as that on which the caesarean took place.		
(3)		In the event of injury or an accident. It is necessary to consult the CFIA [Canadian Food Inspection Agency] if it is for any other reason. The animal must be permanently excluded from this consignment.		
(4)	Applicable only to Member States with a reservoir of feral pigs.			
(5)	Exporters are informed that the animals will be tested during post-import quarantine (on importation into Canada) using the fluorescent polarisation test (FPA). Any non-negative animal will be retested using iELISA.			
(6)	Delete as appropriate.			
(7)	These assurances may be provided on the basis of written declarations from the owner and/or exporter, as appropriate, and provided there is no reason to doubt the veracity of the declarations.
