Part II: Certification	II. Health information		
	I, the undersigned state/official veterinarian certify that:		
	II.1.	Semen from donor-bulls is received in semen collection centre(s) that are under permanent control of the State veterinary service of exporting-country.	
	II.2.	Donor-bulls, from which the semen was collected, were kept on the above mentioned semen collection centre(s) not less than 30 days before semen collection and are not used for natural mating.	
	II.3.	Semen originates from semen collection centre(s) and/or administrative territory which are officially free from following contagious diseases:	
		· foot-and-mouth disease, vesicular stomatitis, rinderpest, contagious bovine pleuropneumonia, peste des petits ruminants - during the last 12 months on the territory of the EU Member State;	
		· brucellosis, leucosis, tuberculosis - during the last 3 years in the semen collection center;	
		· infectious bovine rhinotracheitis, trichomoniasis, campylobacteriosis (Campylobacter fetus venereal) - during the last 12 months in the semen collection center;	
		· (1) <input type="checkbox"/> [bluetongue – during the last 12 months in the premises and/or administrative territory where cattle was not vaccinated against bluetongue, or during not fewer than last 3 months in the premises where cattle was vaccinated against all bluetongue serotypes present or likely to be present in an epidemiologically relevant geographical area of origin;]	
		· anthrax and blackleg – during the last 20 days in the semen collection center;	
		· bovine viral diarrhea, – during the last 12 months in the premises and/or administrative territory;	
	· leptospirosis - during the last 3 months in the premises and/or administrative territory;		
II.4.	The semen presented for examination was derived from donor-bulls which were not vaccinated against brucellosis.		
(2) <input type="checkbox"/> II.5.	Bluetongue was never registered in the semen collection centre(s) and regular laboratory testing showed no seropositive results and no PCR-positive animals were detected] or		
(2) <input type="checkbox"/> II.5.	the donor bulls:		
(2) <input type="checkbox"/> II.5.1.	were subjected to a serological test according to the Terrestrial Manual to detect antibody to the BTV group, with negative results, at least every 60 days throughout the collection period and between 21 and 60 days after the final collection for this consignment;]		
	and/or		
(2) <input type="checkbox"/> II.5.1.	were subjected to an agent identification test according to the Terrestrial Manual on blood samples collected at commencement and conclusion of, and at least every 7 days (virus isolation test) or at least every 28 days (PCR test) during semen collection for this consignment, with negative test results]]		
II.6.	Donor-bulls, from which the semen was collected, were not fed with feeds of animal origin containing proteins processed from ruminant animals, excluding milk proteins.		
II.7.	The donor bulls were not kept together with small ruminants at the semen collection centre.		
II.8.	The donor-bulls showed negative results to tuberculin tests carried out annually		
II.9.	The donor-bulls are at least tested once a year examined with negative diagnostic findings in a state approved laboratory by diagnosis test which accords with the methods approved by the exporting country (specify the method and date of testing) for the following diseases:		
	· paratuberculosis		
	· brucellosis		
	· leucosis		
	· trichomoniasis		
	· campylobacteriosis (Campylobacter fetus venereal)		
	· (3) <input type="checkbox"/> [bluetongue testing by PCR and ELISA (to indicate the date of investigation)]		
	· infectious bovine rhinotracheitis		
	· bovine viral diarrhea		
II.10.	Antibiotics have been added to the semen in accordance with the OIE conditions.		
II.11.	The semen is transported in special containers (tanks) with liquid nitrogen.
